

CONSTRUCTION - DEMOLITION RECYCLING NOTICE

Recycling of construction materials and non-mandatory recyclables result in vastly reduced disposal costs, compliance with state waste mgt rule and county / local solid waste mgt plans. Any commercial construction waste generator must use either county transfer site or recycling sites according to current law. Hauling or disposal at a non-permitted facility is illegal. The fines for mandatory recyclables in the bulk waste at the transfer station are \$3000 per incident and non-compliance with other provisions have various fines.

Best practices for construction demolition operations (via regulation, ordinance or policy) are as follows: Establish stable protected recycling staging area with adequate space for stone, concrete, steel, glass, aluminum, copper etc. Separate recyclables from bulk waste. Estimate equipment, time, tonnage and transportation routes. Identify recycling facilities. Submit the jobsite recycling plan for approval. Carry out the demolition and recycling plan. Obtain tickets and delivery confirmation. Certify compliance at completion of demolition project.

FEDERAL RECYCLING

<http://www.nj.gov/dep/dshw/recycling/stats.htm>

The Department of Environmental Protection specifically states, "Any facility operator or transporter who fails to comply with the provisions contained herein shall be deemed to be in violation of N.J.S.A. 13:1E-1 et. seq., in violation of N.J.A.C. 7:26-1 et. seq., and in violation of their registration to operate a solid waste facility or a collection system issued thereunder by the Department and shall be subject to the provisions and penalties of N.J.S.A. 13-1E-9 and 12 and all other applicable laws.

COUNTY RECYCLING

<http://mcmua.com/>

Morris County Solid Waste Management Plan approving the MCMUA's transfer station operations, transportation and disposal contract includes regulatory flow control over solid waste type 13C(Construction and Demolition debris) meaning that these waste types are required to be delivered to one of the two MCMUA transfer stations located in Mount Olive and Parsippany-Troy Hills Townships for disposal.

Source-separated recyclables are not regulated by flow control and therefore, if Morris County waste generators separate recyclables from disposables at the point of generation, the source-separated recyclables can be delivered to a Material Recovery Facility (MRF) for the purpose of recycling. It should be noted that if the recycling facility has the capabilities, the source-separated recyclables can be mixed with each other for delivery to such a permitted recycling facility for further separation.
