

Borough of Madison, New Jersey

COVID-19 Update 8/18/21

Since the arrival of COVID-19 in early March 2020, there have been a total of 903 confirmed (PCR test) and 338 probable (antigen test) COVID-19 cases reported in Madison Borough*. The chart to the right shows the trend in reported cases over time. The number of new cases has recently increased slightly statewide. Health departments across New Jersey continue to closely monitor emerging variants of concern, like Delta, breakthrough cases among the fully-vaccinated, outbreaks associated with summer travel and camps, and new clusters in communities with low vaccination rates as well as aggressively pursue contact tracing to prevent further community spread and additional outbreaks where possible.

*More information on the definitions “confirmed” and “probable” as well as “PCR” and “antigen” tests can be found [HERE](#).

COVID-19 Cases, Incidence Rate, Deaths, and Case Fatality Rates New Jersey vs. Morris County vs. Madison Borough

	Total Confirmed Cases	Total Probable Cases	Cumulative Incidence Rate per 100k	% of Cases Who Are Facility Residents*	Total Deaths	Overall CFR**	Total COVID Cases Reported by Facilities - Residents*	Total COVID deaths Reported by Facilities - Residents*	CFR** for Facility Residents*
New Jersey	930,076	135,660	10,471	3.6%	24,000	2.6%	33,074	7,890	23.9%
Morris County	43,688	8,546	8,882	4.2%	985	2.3%	1,844	528	28.6%
